Abstract (en)

A stair-climber (10) includes a base (20), a inclination unit assembly (25), and a step unit (70). The inclination unit assembly (25) is pivotally disposed at the base (20). The inclination angle of the inclination unit assembly (25) is adjusted by an inclination unit regulator (50) disposed between the base (20) and the inclination unit assembly (25). The step unit (70) is disposed at the inclination unit assembly (25) and has multiple steps (75). The steps (75) undergo angle adjustment with a step regulator (80) disposed at the inclination unit assembly (25) and thus tilt at angles suitable for a tread performed by users ergonomically.
