Abstract (en)
[origin: EP3073038A1] Described is a hinge for doors of electrical household appliances, comprising a box-shaped element (3) and a first lever (2) pivoted on the box-shaped element (3) by means of a first pin (4); one of either the box-shaped element (3) or the first lever (2) being fixable to a frame, and the other being fixable to a door, to make the door tiltably movable relative to the frame between a closed position and an open position; elastic means (14) supported by the box-shaped element (3) and designed to apply an elastic action on the first lever (2), a damping member (15) for applying a damping action during the reciprocal motion of the first lever (2) and the box-shaped element (3), in proximity of reaching the above-mentioned closed position, means (29) for actuating the damping member (15).
