Abstract (en)

[origin: US2016281392A1] A device (10) for receiving notes of value has a receiving area (12) for receiving notes of value and a shaft (20) with one hook (26, 28) at each end. The hooks are movable between a locking position and an unlocked position by rotation of the shaft (20). A handle (14) is arranged on the shaft (20) so that the shaft (20) runs through a first hole (34) and a second hole (36) at both ends (16, 18) of the handle (14). The first hole (34) is formed so that upon rotation of the handle (14) within a predetermined range, a torque is transmittable to the shaft (20) via engagement between the shaft (20) and the first end (16) of the handle (14). The second hole (36) is formed so that upon rotation of the handle (14) no torque is transmitted to the shaft (20) via the second end (18).
