Abstract (en)

[origin: WO2015079410A1] The present invention refers to a sports sock specially conceived for sports in which the use of shin pads is required or advisable, for example in the case of football, rugby or hockey. This sock is composed of a sock foot (1) and a sock leg (2) which prevent the shin pad (4) from moving out of the position intended by the athlete by incorporating in its interior a system of elastic straps (5) which prevent the shin pad (4) from moving horizontally. Its exterior has an elastic strap which prevents the shin pad (4) from moving vertically whilst at the same time acting as an attachment system (3) being used to attach the sock leg (2) to the sock foot (1) when being detachable from each other, in case the athlete chooses to use these parts in separate.
