Abstract (en)
[origin: WO2015079449A1] The locking device (1), for locking a first element relative to a second element, comprises: - a locking element (8) provided on the first element, movable between a locking position and an unlocking position, - one groove (10) provided on the second element, the locking element (8) engaging inside the groove (10) when the locking device moves to its locked position and being placed at one end of said groove (10) when the locking element is in its locking position. The locking device further comprises an actuation device (28) movable between a blocking position, wherein the actuation device maintains the locking element (8) in its locking position, and an unblocking position, wherein the actuation device (28) frees the locking element (8).
