Abstract (en)  
[origin: WO2015075256A1] The invention relates to a shower assembly which comprises a shower head housing (2) with a fluid inlet (6) and a distributor plate (8a) in the shower head housing, wherein a multiplicity of separate fluid-guiding paths (9a, 9b, 9c) is formed and the distributor plate has passage openings extending from the fluid-guiding paths. According to the invention, the shower assembly comprises a multiplicity of jet disks which, on the inner side, have different chamber-forming and/or or fluid-blocking structures (23) and which can be selectively mounted on the distributor plate and have in each case one or more jet outlet openings (16). In this case, the chamber-forming structure of a respectively mounted jet disk forms, between distributor plate and jet disk, a jet disk-specific outlet chamber structure into which the passage openings issue. In addition or alternatively, the fluid-blocking structure of a respectively mounted jet disk forms, between distributor plate and jet disk, a jet disk-specific fluid-blocking structure which blocks at least one of the fluid-guiding paths.
