Abstract (en)  
[origin: WO2015078912A1] The invention relates to a system for the dynamic reading of data from a vehicle tyre transponder having a linearly polarized antenna, said system comprising at least one antenna that can receive data transmitted by the transponder and at least one reader coupled to the antenna and capable of reading and storing the data from the transponder, in which the antenna is a linearly polarized antenna with a vertical electric field.
