Abstract (en)

[origin: WO2015079098A1] There are disclosed various methods and apparatuses for generating oscillator signals. In some embodiments the method comprises receiving a reference clock signal; obtaining a set of phase shifted reference clock signals; obtaining a phase selection control; using a most significant part of the phase selection control to select one of the phase shifted reference clock signals; and using a least significant part of the phase selection control to delay the selected phase shifted reference clock signal.
