Abstract (en)

[origin: WO2015077811A1] A LED module (1) comprises: terminals (2) for a LED section (3); a circuit (4) designed to represent a load, preferably an active load, when a supply voltage (5a) is applied to the LED module (1) during a starting phase, and designed not to represent a load when the starting phase is finished, the circuit (4) being configured to represent a current-variable load which causes the power consumption of the LED module (1) to change according to at least one predefined protocol.
