Abstract (en)

[origin: EP3075913A1] A method for reducing moisture build-up in a cavity (5) of a cavity (5) wall (1) of a building is disclosed. The method comprises the steps of: #c constructing an inner wall (4) on a foundation (2) of the building substantially along an inner side of the foundation (2), #c arranging a water impermeable sheet (8) so that it extends from an inner face of the inner wall (4) and across the cavity (5) to an outer side of the foundation (2), and #c constructing an outer wall (3) on the water impermeable sheet (8) along an outer side of the foundation (2) so that the cavity (5) is formed between the inner wall (4) and the outer wall (3), wherein the water impermeable sheet (8) is at least partly arranged to incline downwards from the inner wall (4) towards the outer wall (3).
