Abstract (en)
The ventilated facade system comprises: a support frame (2) fixed to a surface (3) of a wall (4) to be covered; a plurality of covering panels (1), each having an outer face and an opposite rear face (1A) and being fixed to the support frame (2) in a selected arrangement; a plurality of fixation means for fixing said panels (1) to said frame (2), which comprise: at least one first plate-like support element (5) having a flat body, which is fixed to said frame (2) and has at least one outwardly-projecting and shear-resistant first support bracket lip (11); at least one second plate-like support element (6) having a plate body with one edge (17) folded to form an acute angle, to be inserted into a corresponding cavity (18) formed in said rear face (1A), which element is resistant to tensile stress and has a portion designed to be fixed to said frame; at least one third flat element (7) for guiding the concurrent edges (8) of contiguous panels (1), which element is fixed to said frame (2).
