Abstract (en)

[origin: WO2015084866A1] A universal front-facing merchandiser is described having a front rail having a first mating structure and a plurality of integrated pusher and divider assemblies. Each divider assembly includes a second mating structure that corresponds to and mates with the first mating structure to couple the integrated pusher and divider assemblies to the front rail. The mating structures of each pusher and divider assembly and the front rail are movable between a first position where the integrated pusher and divider assembly is coupled to and laterally movable about the front rail and is not removable from the front rail without force being applied to the integrated pusher and divider assembly and a second position where the integrated pusher and divider assembly is secured to the front rail in a desired position in a manner that hinders lateral movement of the integrated pusher and divider assembly.
