Abstract (en)  
[origin: WO2015082574A1] The invention relates to an electric baking device comprising a housing (10) which has a lower part (12) and an upper part (13) and at least one heating element (18, 19) which is arranged in the lower part and/or the upper part. Said lower part (12) and the upper part (13) are interconnected by means of a joint (14) so that they can pivot and define a baking chamber (15) in the closed state, in which at least one removable baking element (16, 16') is arranged. Said baking device is characterised in that the removable baking element (16, 16') is at least partially made of silicon rubber.
