Abstract (en)
[origin: WO2015082055A1] A device for filling a receptacle (1) with a liquid, especially a drinking liquid, comprises a balloon-type body (4) which can be introduced into an opening (3) in the receptacle (1) and can be filled and inflated in such a way that the balloon-type body (4) rests against the inner surface of the receptacle (1). In the initial state, before being inflated, the balloon-type body (4) is folded about the circumference in order to increase the size of the circumferential line of the balloon-type body (4) compared to a simple circle.
