Abstract (en)

[origin: WO2015083061A1] The invention relates to a washing/drying machine, wherein washing water circulation is controlled by a pair of valves (20, 21) that distribute the flow into either or both branches (22, 23) of a distribution circuit. The washing/drying machine provides energy savings because the drying air condenser (14) can be cleaned by using wash or rinse water during the operating steps of the washing/drying machine.
