Abstract (en)

[origin: CA2940737A1] The invention relates to a method and to a device for operating a system (10) comprising a generator (12) and an internal combustion engine (14) driving the generator (12), wherein a rotational speed of the generator (12) is controlled by means of a rotational speed controller (34). Said method is characterized by the fact that the rotational speed controller (34) outputs a target torque as manipulated variable, and that an additional torque is imposed on the target torque, wherein the additional torque is calculated or is determined on the basis of a measured value picked up from the system (10).
