Abstract (en)

[origin: WO2015082282A1] The invention relates to a domestic appliance (1) having an interior (4, 5), which interior is bounded by walls (3a, 3b, 3c) of an inner container (3), wherein a movable carrier slide (11) is arranged in the interior (4, 5), which carrier slide is designed to accommodate at least one container (9, 10) for food, and a guiding device (23) is formed, to which the carrier slide (11) is connected and by means of which the carrier slide is guided in the motion of the carrier slide in the depth direction of the interior (4, 5), wherein the carrier slide (11) has a receptacle (24) in a region (11a) at the rear with respect to the depth direction of the domestic appliance (1), which receptacle is designed for coupling to a coupling element on the container (9, 10), in such a way that the container (9, 10) is motion-coupled to the carrier slide (11) in the depth direction, wherein the carrier slide (11) has rollers (16 to 19), by means of which the carrier slide can be moved in the interior (3).
