Abstract (en)

[origin: US2015154559A1] Various embodiments of the present invention involve systems, methods, and computer program products utilized in facilitating alternative delivery options for customers. In certain embodiments, a consignee may meet a driver and receive an item at a location different from the delivery address associated with the item. The receipt of the item may be prior to the driver attempting to deliver the item to the designated shipping location or after an unsuccessful delivery attempt. The carrier, the driver, the carrier system, the mobile station, and/or the sensors located on the item may communicate with the consignee to arrange a mutually acceptable time and location to accomplish the delivery. In certain embodiments, the consignee may be responsible for arriving at a dynamic delivery location to retrieve the item while the driver is at the location performing other tasks.
