Abstract (en)
[origin: WO2015082226A2] The invention relates to a shield strip comprising a longitudinally extended central bar (11, 11', 11'') and a plurality of printable identification plates (10, 10', 10'') for identifying electrical components, wherein the identification plates (10, 10', 10'') are each arranged one behind the other on both sides of the central bar (11, 11', 11'') along the central bar (11, 11', 11''), and are connected to the central bar (11, 11', 11'') by means of connecting pieces (12, 12', 12''). According to the invention at least two retaining pins (14, 15) of different shape and/or size are arranged on the central bar (11, 11', 11''), each designed for engaging with an assigned holder (24, 25) of a magazine (2) for insertion into a printing device. In this way, a shield strip is provided, for the production of which, with respect to a respective identification plate, the material requirement is low, and which is easy to handle.
