Abstract (en)
[origin: WO2015082778A1] - The segmented structure (1) comprises at least two panels (2, 3, 4), a first panel (2) termed the principal panel and a second panel (3, 4) termed the secondary panel, as well as at least one deployment device (5) capable of bringing an associated secondary panel (3, 4) into a storage position (P1) or into a deployed position (P2), the deployment device (5) including a translation system comprising a movable trolley, guided in translation and provided with a connection arm (9) which is connected to the rear face (3B) of the secondary panel (3), the translation system being capable of generating a translation movement of said secondary panel (3) with respect to the principal panel (2) and a rotation system capable of generating at least one rotation of the connection arm (9) in such a way as to generate a rotational movement of said secondary panel (3, 4) with respect to the principal panel (2).
