Abstract (en)

[origin: WO2016162260A2] The invention relates to a method for producing a shoe, comprising the steps of: providing a mounted upper having a perforated insole, providing a single-piece sole construction having a sole solid body and one or more recesses in said sole solid body, providing an air pump device, providing a first air channel extending at least partially within the upper and designed to feed air to said air pump device, providing a second air channel designed to conduct air away from the air pump device, providing a first valve associated with the first air channel and designed only to let air through in the direction from the exterior of the sole construction to the air pump device, providing a second valve associated with the second air channel and designed only to let air through in the direction leading away from the air pump device, and connecting the single-piece sole construction to the mounted upper with the insole such that the air pump device, the second air channel and the second valve are positioned between the insole and the single-piece sole construction, in the one or more recesses.
