Abstract (en)
[origin: EP3078457A1] A pipe pressing device for pressing a locking fastener onto a pipe includes a body, a clamp assembly and a rack disposed on the upper portion of the body, and a movable handle, a rack control member and a stationary handle disposed at the lower portion of the body. The rack control member below the body is disposed between the stationary and movable handles and located adjacent to the stationary handle, which allows the user to push the movable handle while gripping the movable and stationary handles with both hands, so that the user's finger can press the rack control member easily to make the rack move or positioned quickly and smoothly, which makes the pipe pressing device convenient to use and operate.
