Abstract (en)

The present invention refers to a capsule (1) for an edible product presenting at least a first construction element (2) configured in a container-like form, and a second construction element (3) configured in a lid-like form, provided so as to contain a dose (4) of at least one edible substance, wherein said second construction element (3) presents a plurality of structural reinforcement elements (31) that provide better mechanical engagement with said first construction element (2), lower needs of construction material and of processing energy, notably when used for the preparation of aromatic beverages such as for example espresso type coffee, tea and similar. The present invention further refers to a process of use of said capsule (1), including for the preparation of aromatic beverages such as for example espresso coffee, tea and similar.
