Abstract (en)

[origin: TW201636467A] A sectional-warp sampling machine (1) having a sectional-warping drum (2), a plurality of conveying faces (8) which are movable in a direction from one axial end of the sectional-warping drum (2) to the other axial end of the sectional-warping drum (2) being disposed on the circumference thereof, and having a thread-guide assembly (7) which has at least one thread guide (6), wherein the thread guide (6) and the sectional-warping drum (2) in relation to one another are rotatable about an axis (X), is stated. The intention is to achieve high productivity in a sectional-warp sampling machine of this type. It is provided to this end that at least one conveying face (8) of the conveying faces is displaceable in a direction towards the axis (X).
