Abstract (en)

[origin: WO2015089414A1] A balloon access device for use with an endoscope is disclosed. A transparent balloon attached to the distal end of the endoscope allows a user to both separate collapsed intestinal tissue and visualize the path of the endoscope without administering insufflation gas to the collapsed area of a patient. The attachment of the balloon to the endoscope is achieved by the various embodiments of the balloon access device disclosed herein.
