Abstract (en)  
[origin: WO2015086084A1] The invention relates to a valve gun (10) for a high-pressure cleaning device, comprising an inlet channel (73) with an inlet (74) for feeding in a pressurized liquid and an outlet channel (75) with an outlet (76) for discharging the liquid, a valve (20) arranged in the flow path between the inlet (74) and the outlet (76), a triggering member (34) which can be moved manually between an inoperative position and a release position and is intended for opening and closing the valve (20), a first arresting member (39) which can be moved manually between a blocking position and an unblocking position and is intended for arresting the triggering member (34) in the inoperative position, and a handle (24) around which a user's hand can grip to hold the valve gun (10). In order to develop the valve gun such that it can be handled more easily, it is proposed according to the invention that the triggering member (34) is arranged at the rear side of the handle (24) that faces away from the outlet (76) and that the first arresting member (39) is arranged at the front side of the handle (24) that faces the outlet (76).
