Abstract (en)

[origin: WO2015086274A1] The invention relates to a means of transportation (1), in particular scooter, for transporting a person, wherein the means of transportation has a holder (7) with a holding surface (11) for holding the person, wherein the means of transportation is driveable by the person pushing off, wherein the means of transportation has a motor (8) for boosting the drive of the means of transportation, wherein the means of transportation has a detection means (15) for detecting a pushing-off state and a control means (14) for controlling the boosting of the drive depending on the detected pushing-off state, wherein the detection means comprises a sensing means (10) for sensing a force exerted on the holding surface by the person.
