Abstract (en)

[origin: WO2016011565A2] The invention relates to a device (1) and associated method for aligning loose items of sheet material (2), such as, for example, banknotes. The device comprises a conveying channel (3) in which the items of sheet material (2), standing on one of their long edges or broad edges, are transported through a conveying device in conveying direction (F). During transportation, one or more profiled members (13) act such that those items of sheet material (2) standing on their broad edges are tipped over onto their narrow edges.
