Abstract (en)  
[origin: WO2014091094A1] The invention concerns an energy generation system comprising a first generator producing electrical energy, an electrolyser producing oxygen and hydrogen from electricity and water, a heat exchanger producing a high-pressure gas from a refrigerant, a turbine producing rotational energy from the high-pressure gas and arranged to rotate the generator, and a heat energy producing rotational energy, said heat engine being supplied with hydrogen, oxygen and fuel.
