Abstract (en)  
[origin: WO2015086579A1] The invention relates to a fluid distributor for a device (1) for thermal conditioning of a fluid for a motor vehicle including at least one first and one second thermal modules (3a, 3b) which are substantially cylindrical, the fluid distributor (21) extending along a longitudinal axis (B) and including: a fluid intake opening (31); a first substantially circular fluid passage (27a); a second substantially circular fluid passage (27b), the opening (31) and the first and second fluid passages (27a, 27b) being aligned according to the longitudinal axis (B); and at least one rib (33a, 33b) arranged at the periphery of an associated fluid passage (27a, 27b), having a semicircular shape defined by the longitudinal axis (B) of the fluid distributor (21) and comprising two end edges (35, 37; 39, 41), and at least one adjustment area (Z) aligned with one end edge (35, 37) extending over an angle ( $\alpha$ ) of around 0° to 45° relative to the longitudinal axis (B) of the fluid distributor (21). The invention also relates to a device for thermal conditioning of a fluid including such a fluid distributor and to a heating and/or air-conditioning apparatus including such a device.
