Abstract (en)

[origin: WO2015086430A1] The invention relates to a domestic refrigeration device (1), comprising a housing (2), in which an inner container is arranged, which inner container bounds an interior (3, 4) for accommodating foods, and comprising a machine chamber (12) separated from the interior (3, 4), in which machine chamber at least components (6 to 11) of a refrigeration circuit of the domestic refrigeration device (1) are arranged, wherein a carrier shell (11) is arranged in the machine chamber (12), on which carrier shell at least one further part (6, 43, 44, 45, 46, 47, 48) is retained in such a way that the at least one further part is connected by at least one snap connection (49) and/or at least one plug-in connection (50, 53) and/or a locking connection (59) without any additional fastening elements.
