Abstract (en)

[origin: WO2015086185A1] The invention relates to a domestic refrigerator (1) having a thermally insulated inner container (2) which has two opposing lateral walls (3a, 3b), a bottom wall (4), a top wall (5), and a rear wall (6) that delimit a storage space (8) for refrigerated goods, said storage space being accessible via a door leaf (7) which is mounted in a movable manner relative to the inner container (2). The refrigerator also has at least one shelf (13) which is arranged in the storage space (8) between the two opposing lateral walls (3a, 3b) and which forms a support surface for the refrigerated goods. The refrigerator also has a refrigerated goods drawer (14) which is mounted in the storage space (8) in a movable manner between a closed position and an open position and which has a drawer space (15) that is delimited by at least one drawer wall. The refrigerated goods drawer (14) is designed to seal against a lower face of the shelf (13) in the closed position in order to seal the drawer space (15) in a moisture-tight manner.
