Abstract (en)

[origin: WO2015135719A2] The invention relates to an insulating tape (1) in the form of a particle composite for an electrical insulating tape, use thereof as insulation, the insulation and the production of the insulating tape (1), wherein electrically insulating, platelet-shaped particles are connected by means of an electrically insulating binder to an electrical insulating material in the form of an at least partially porous insulating tape (1). The invention is characterized in that the insulating tape (1) is windable on a conductor structure (9, 11) when wound under exerted tension force, namely without addition of a materially additionally impeding heat flow. A thermal conductivity which is greater relative to the prior art is advantageous for preventing heat accumulation and total failures, in particular of main insulation (7).
