Abstract (en)
[origin: WO2015087019A1] Method of synchronization of data between a set of terminals. The invention relates to means for sharing and synchronizing data between a set of terminals. In particular, the synchronizing means are adapted to be implemented on a first terminal from among the set of terminals and comprise: • means adapted for allowing the selection of a second terminal from among said terminals; • means for obtaining a storage organization specific to the second terminal, and for allowing the selection in said organization of a path for access to a set of data; • means of receiving and storing the selected set of data; • means of maintaining the synchronization of the set of data between the first and the second terminal.
