Abstract (en)
[origin: WO2015101462A1] The invention relates to a heated laminated windscreen made up of two sheets of glass joined by an inserted sheet, comprising a system of conductive layers covering most of the surface of one glass sheet of the windscreen, said system being electrically powered by busbars at the top (6, 13, 14) and bottom (7) of the windscreen, with windows (2, 3, 4) which are devoid of layers arranged at the top in the middle of the windscreen, and the windscreen including at least one additional busbar arranged laterally on the edges and at the top of the windscreen.
