Abstract (en)

[origin: EP3081128A1] The present invention relates to a disinfecting device comprising a collecting device disposed under a dispensing nozzle for disinfectant liquid and configured to collect disinfectant liquid dispensed by the dispensing nozzle, the collecting device comprising an at least substantially closed collecting surface and a grid that is permeable to disinfectant liquid, which grid is located some distance above the collecting surface, and which, seen in the position of use, has a horizontal cross-sectional area which is at least 25% open. The invention further relates to a disinfecting device provided with such a collecting device.
