Abstract (en)

A container for waste materials for use in the insulation of buildings, comprises a base, at least one side wall extending upwardly from the base, a top wall, an opening formed in at least one of the walls of the container, and a flap configured to form a closure over the opening, the flap having attachment means for securing the flap to form the closure, wherein the container is formed from a fire retardant material, and the base of the container is either coated or formed from a heat-reflecting material. The container is filled with one or more waste materials and used for insulation of a building.
