Abstract (en)
[origin: WO2015091589A1] The invention relates to a work tool for driving a securing element into a substructure, comprising: a guide channel for said securing element; a piston (8) which can be pushed towards said securing element proceeding from a starting position in which the piston (8) is at rest, so as to transmit energy to said securing element arranged in the guide channel; a feed device for conveying the securing element into said guide channel; and a feed-delay device for delaying said securing element being conveyed into the guide channel until the piston (8) has returned into the starting position following a driving process.
