Abstract (en)  
[origin: WO2015091113A1] The invention relates to a driving-in tool, comprising a hand-held housing (1), having a piston member (2) received therein for transferring energy to a fastening element to be driven in, an interchangeable propelling charge and a combustion chamber (3) arranged between the propelling charge and the piston member (2), which preferably extends about a central axis (A), and an actuator (104) by means of which the energy transferred from the propellant charge to the piston member (2) can be variably adjusted, wherein a discharge channel (111) connected to the combustion chamber (3) can be unblocked by means of a movable slide (105) of the actuator (104), wherein a start position of the piston member (2) is variably adjustable by means of the slide (105).
