Abstract (en)

[origin: WO2015089581A1] A vehicle detector unit for detecting presence of a vehicle moving along a rail, including a distance sensor for sensing a body of the vehicle, a rail translation sensor for sensing translation of the rail, a rail torsion sensor for sensing torsion of the rail, and a processor adapted to process data received from the distance sensor, the rail translation sensor and the rail torsion sensor, whereby the processor applies an algorithm to said data to determine whether to output an alert signal.
