Abstract (en)

[origin: WO2015091550A1] The invention relates to a tank intended for storing hydrogen by absorption in a hydrogen storage material, including a ferrule (4) with a longitudinal axis (X) closed off at both of the longitudinal ends thereof, a supply of hydrogen, an outlet for the released hydrogen and at least one heat-transfer element (8) mounted transversely in the ferrule (4) and in contact with the inner surface of the ferrule (4), said heat-transfer element having an outer peripheral edge formed by a tab in resilient contact with the inner surface of the ferrule (4) such that the contact between the heat-transfer element (8) and the ferrule (4) is maintained during temperature variations throughout the hydrogen loading and discharging phases, said heat-transfer element (8) being intended for ensuring heat transfers from and towards the storage material intended for being contained in the tank.
