Abstract (en)
[origin: WO2015091571A1] The present invention relates to a refrigeration device (100) having a first refrigeration compartment (101-1) for storing refrigerated goods at a first temperature, said first refrigeration compartment comprising a first evaporator (103-1) with a first controllable expansion valve (105-1) at the refrigerant inlet (107-1) of the first evaporator (103-1), and having a second refrigeration compartment (101-2) for storing refrigerated goods at a second temperature, said second refrigeration compartment comprising a second evaporator (103-2) with a second controllable expansion valve (105-2) at the refrigerant inlet (107-2) of the second evaporator (103-2), in which refrigeration device a refrigerant outlet (109-1) of the first evaporator (103-1) is connected to the second controllable expansion valve (105-2) at the refrigerant inlet (107-2) of the second evaporator (103-2).
