Abstract (en)  
[origin: WO2015091121A1] The aim of the invention is to disclose a warhead (1) with a warhead casing (2) that contains an explosive charge, wherein the explosive charge can be produced in a simple manner and be subjected to a secure and meaningful quality control without that, as a result, the explosive action of the explosive charge is negatively influenced. In order to achieve said aim, the invention proposes that, instead of using an unified explosive charge which is produced by pressing or casting an explosive mixture into the warhead casing (2), a plurality of smaller, prefabricated explosive charge modules (6-11) containing explosive charge bodies (13) are arranged inside the warhead casing (2).
