Abstract (en)

[origin: WO2015092679A1] A system (10) and a method (100) integrate the display of vital signs data and relevant medical intervention data. Measurements of a vital sign of a patient are received (102) and a graph (30) of the measurements over time illustrating a trend of the vital sign is displayed (106). Data describing a medical intervention affecting the vital sign is received (104) and an indicator (40) of the medical intervention on the graph (30) at a time of the medical intervention is displayed (108). Predictions of the effect of the medical intervention on the vital sign are further received (110) and displayed temporally synchronized with the measurements (112).
