Abstract (en)  
[origin: WO2015090917A1] The invention relates to a transparent lighting device (100), with light-emitting diodes (140), comprising first and second glass panels (110), the first (111) and third (121) surfaces of which are at least partially covered with light-emitting diodes (140), said glass panels being spaced apart by means of a spacer (130). According to the invention, such a lighting device comprises diodes arranged on at least one portion of the second (112) and third (121) surfaces of the glass panels, said light-emitting diodes being separated on the same line by a pitch of at least 50 mm. Furthermore, the first (110) and second (120) glass panels are spaced apart from one another by a distance of at least 2 mm.
