Abstract (en)
[origin: WO2015091868A1] The invention relates to a switching device (1) comprising a first switching path (2) having first switching contacts (3) and comprising a second switching path (4) having second switching contacts (5), wherein the first switching path (2) has a first electromagnetic tripping apparatus (6) having a first coil winding (7), wherein the first coil winding (7) has a first winding direction (8), wherein the second switching path (4) has a second electromagnetic tripping apparatus (9) having a second coil winding (10), wherein the second coil winding (10) has a second winding direction (11), wherein the first switching contacts (3) and the second switching contacts (5) are coupled for substantially simultaneous actuation, and wherein the first switching path (2) and the second switching path (4) are arranged adjacent to each other in the switching device (1), wherein, according to the invention, the first winding direction (8) is opposite the second winding direction (11).
