Abstract (en)  
[origin: WO2015091703A1] The invention relates to a fuse holder (1) comprising two housing elements (4, 5) which, once assembled, together form a tube in which a support (9) for a fuse (10) is accommodated. Each of the two housing elements (4, 5) comprises a contact (3) for establishing an electrical contact with a terminal (10a) of a fuse (10) housed in the support (9), when the support (9) is installed between the assembled housing elements (4, 5). The support (9) may comprise means (16) to ensure the correct position of each contact (3) in its respective housing element (4 or 5). The support (9) may also comprise means (13a) to ensure the correct orientation of the fuse (10) in the support (9). The support (9) may also comprise means (15a) for retaining a seal (11) ensuring sealing between the two housing elements (4, 5).
