Abstract (en)

[origin: WO2015090688A1] The invention relates to a control device (1) for a motor vehicle, in particular a motor vehicle comprising an electric drive, comprising a housing (2) which encloses a cavity (3), wherein the control device (1) has a power apparatus (4) arranged in the cavity (2), in particular an inverter. A housing wall (21) of the housing has an aperture (5). An electrical connection (6) of the control device (1) is passed through the aperture (5) and has an electrically conductive sleeve (7) and a bolt (8). The sleeve (7) is electrically connected detachably to the power apparatus (4). The bolt (8) is passed through the sleeve (7) and is designed to hold an end section (10) of an electrical connection cable (9) fixedly and to press the end section against a sleeve end, in the form of an end face (15, 16), of the sleeve (7) and thus to connect the electrical connection cable (9) to the connection (6).
