Abstract (en)  
A reconfigurable pallet (10) is disclosed for supporting items placed thereon. The pallet is reconfigurable between an assembled configuration for use and a disassembled configuration for storage and comprises at least two stringers (20) and a plurality of deck members (30) which are arranged to extend between the stringers. The stringers are arranged to support the deck members in spaced relation above a pallet support surface and comprise a plurality of deck receiving regions (24) formed therein for separately receiving at least a portion of deck member. The stringers further comprise a channel (26) which extends along each stringer between the regions. The pallet further comprises at least two locking members (40) which are separately removably insertable within a channel of a stringer and which are arranged to extend over at least a portion of each deck member and under at least a portion of a stringer, to lock the deck members to the respective stringer.
