Abstract (en)

[origin: CN106066114A] The invention relates to a household refrigeration appliance (5) having a housing (6), in which a reception space (7, 8) for food is formed; a door (9, 10) movably arranged on the housing (6) and used for closing the reception space (7, 8); a support angle (13, 14, 15), through which the door (9, 10) is connected to the housing (6), wherein the support angle (13, 14, 15) is formed from a one-piece cut element (28) made of metal and has a plate-shaped first support angle section (16). A second support angle section (19) leads to the first support angle section at a certain angle and the support angle (13, 14, 15) has a support pin (20). The support angle (13, 14, 15) has a plate-shaped support top (21), which passes to the first support angle portion (16) and is angularly arranged with respect to the first support angle portion. The support top (21) extends beyond the second support angle section (19) partly, also top-like, via an exceeding portion (23).
